AHMAD HUSEIN HAMBALI - Fullstack Engineer

Malang, Indonesia · **E-mail:** ahmadhuseinh.03@gmail.com · **GitHub:** github.com/ucencode
Website: https://ucencode.github.io · **LinkedIn:** linkedin.com/in/ahmadhuseinhambali03/

Fullstack engineer with 5+ years of experience building healthcare and ERP products for clinics and businesses in Germany, the UK, and Indonesia. As founding engineer at a remote German clinic software startup, built the platform's core workflows and integrations with insurance providers and labs, and set up the engineering practices as the team grew to 9. Ships across the stack, from React to Node.js, PostgreSQL, and cloud infrastructure, and builds LLM-powered tools on the side.

SKILLS

Languages: TypeScript, JavaScript, PHP, SQL, Python, Go
Backend: Node.js (Express.js), Laravel, FastAPI, Gin, Odoo
Frontend: React, jQuery
Architecture & APIs: Modular Monolith, Event-Driven Architecture, Microservices, REST APIs
Cloud & DevOps: Linux, Docker, CI/CD (GitHub Actions), Google Cloud, Argo CD
Data & Messaging: PostgreSQL, Meilisearch, Redis, TimescaleDB, SSE, MySQL
Observability: Sentry, Datadog, Grafana, PostHog

PROFESSIONAL EXPERIENCE

Founding Engineer | NoscAi GmbH | Germany | Remote Jan 2024 – Dec 2025
Tech: Node.js, TypeScript, React, PostgreSQL, Redis, BullMQ, Pub/Sub, Google Cloud

- Bootstrapped ClinicOS engineering practices, establishing code review, testing, and formatting standards while onboarding new hires and scaling the team to 9 engineers.
- Reworked the generic Medusa.js admin into a clinic-specific interface, designing role-based navigation around clinical workflows to keep core tasks within three clicks.
- Reduced data-entry errors to near zero and eliminated manual submissions by developing asynchronous API and event-driven workflows across invoicing, insurance, external labs, and wearable devices.
- Cut build times by 25% and accelerated CI/CD pipelines by owning an architecture simplification that merged the core module into a forked Medusa.js base, eliminating the inheritance chain.

Software Engineer (Freelance) | Pitcar Service | Indonesia | Remote Aug 2023 – Oct 2024
Tech: Python, Odoo, PostgreSQL, XML/QWeb

- Centralized service, inventory, and financial operations supporting 400–450 monthly service units by migrating fragmented workshop tools to Odoo 16 ERP.
- Built a custom Odoo module for car repair workflows, including vehicle audit trails, mechanic tracking, and search by brand, model, plate, and customer.

Full Stack Developer | CV. Indokoding Sukses Makmur | Indonesia | On-site Sep 2021 – Jan 2024
Tech: Laravel, PHP, MySQL, Blade Templates, JavaScript, jQuery

- Enabled life-critical patient recall workflows by integrating GovNotify and Twilio for automated appointment reminders across NHS-associated GP clinics.
- Reduced query execution times 60–75% by optimizing SQL queries and adding targeted indexes across the BookYourGP codebase.
- Improved long-term maintainability of BookYourGP by rewriting legacy PHP system into Laravel.

Web Developer | PT. Bama Berita Sarana Televisi | Indonesia | On-site Jun 2020 – Jul 2021

Software Engineer Intern | PT. Hyperdata Solusindo Mandiri | Indonesia | On-site Jul 2018 – Jun 2019

PROJECTS

Study AI Tools | github.com/ucencode/study-ai-tools
Tech: Python, FastAPI, React, OpenAI API, Ollama API

- Built a local-first AI study tool that converts lecture slides and textbooks into structured learning content and personalized study plans using local LLM inference.
- Developed an asynchronous FastAPI pipeline with job-progress tracking, LLM output validation, and OCR result caching to avoid redundant Vision LLM processing.

EDUCATION

Vocational High School Diploma in Software Engineering | SMK PGRI 3 Malang Jul 2017 – May 2020

CERTIFICATION

British Council EnglishScore Core Skill | CEFR B2 Sep 2026
